

About Osso VR

Osso VR is the leading immersive procedural-skills training platform in healthcare. Co-founded in 2016 by UCLA- and Harvard-trained pediatric orthopedic surgeon Justin Barad, MD, Osso VR is trusted by hospitals and used by more than 100,000 healthcare professionals worldwide. Our award-winning, peer-reviewed platform combines hands-on practice with real-time performance insights and now extends to nursing with the Osso VR Nursing Series and Osso Loop™ learning platform, helping health systems address complex workforce and quality challenges. Osso VR has earned multiple industry awards, including recognition from TIME Best Inventions, Fast Company Most Innovative Companies in Healthcare, and the SXSW Innovation Awards.

About Osso Nurse Training

Osso Nurse Training helps health systems break onboarding bottlenecks by combining immersive VR practice with measurable performance analytics. Built in collaboration with frontline nurse educators, the platform gives new graduates a safe, cost-effective way to build critical procedural skills while easing pressure on nurse educators.

Through the Osso VR Nursing Series and companion Osso Loop™ learning platform, training is structured around end-to-end clinical workflows and anchored to Osso's proprietary Domains of Excellence™, which connect individual performance to national standards and systemwide priorities. The result is scalable, consistent training that accelerates readiness, supports retention, and aligns directly with organizational quality goals.
